

Paper 1

1. ASA Physical status classification
2. Standard Anaesthesia monitoring
3. Liver function tests
4. Informed consent and its importance in Anaesthesiology
5. Safety features of Anaesthesia machine
6. Pulse Oximetry
7. Anaesthesia record keeping
8. Propofol
9. Corticosteroids and their role in COVID-19
10. Mapleson's circuits
11. Sugammadex
12. DLT's
13. HFOT (High Flow O2 Therapy)
14. The compliance and resistance loops
15. Capnometry
16. Happy Hypoxia
17. Heat Moisture Exchanger (HME)
18. High flow nasal Cannula Oxygenation
19. Mixed Venous Oxygen tension
20. Functional Residual capacity
21. Desflurane
22. Virginia Apgar
23. Safety mechanisms to prevent the delivery of hypoxic mixture in Anaesthesia machines
24. Oxygen Dissociation Curve
25. ASA
26. Venturi Principle
27. Iatrogenic Hyponatremia
28. WTG Morton
29. B-blockers and Anesthesia
30. Anaesthesia Record keeping
31. Anion Gap
32. Awareness during Anaesthesia
33. Safety features of Anaesthesia machine
34. Supraglottic airway devices
35. Clonidine
36. Esmolol
37. TAP block
38. Arthur Guedel
39. Function Residual capacity and its anesthetic implications
40. Diffusion hypoxia
41. Minimal alveolar concentration (MAC)
42. Venturi principle and its application in anesthesia equipment
43. Supraglottic airway devices
44. Brain Circuit
45. Pulse Oximetry
46. Anatomy of Brachial plexus block
47. Dexmedetomidine
48. WTG Morton

Paper 2

1. Basics of Oxygen therapy
2. Dexmedetomidine
3. Bone cement implantation syndrome
4. Acid aspiration Syndrome (Mendelsons Syndrome)
5. TAP Block
6. Supraglottic airway devices
7. ARDS
8. Methods of reducing Intracranial Pressure
9. Enhanced recovery after surgery (ERAS)
10. Trans dermal drug delivery
11. Anaesthetic management of a 4 years child for squint surgery
12. L.A.S.T
13. Low flow Anaesthesia
14. Sepsis and anaesthesiologist
15. Non cardiogenic pulmonary oedema
16. LMWH in COVID patients
17. BCIS (bone cement implantation syndrome)
18. TAP block
19. Alveolar gas equation
20. Remedisivir
21. Hypoxic Pulmonary vasoconstriction
22. Mendelson syndrome
23. DVT prophylaxis
24. Criteria for weaning
25. Peri-operative fluid therapy in paediatric patients
26. Monitored Anaesthesia care
27. Anaesthetic management of obstructive sleep Apnea
28. Anaesthetic challenges in MRI suite
29. Dexmedetomidine
30. Measures to reduce raised intra cranial pressure
31. Management of thyroid storm
32. Supraglottic airway devices
33. Oxygen flux
34. Supine hypotension syndrome
35. Alveolar gas equation
36. Airway pressure release ventilation
37. DVT prophylaxis
38. Hypoxic pulmonary vasoconstriction
39. Informed consent
40. Walking epidural
41. Thyroid storm
42. Pain pathways
43. DKA

Paper 3

1. Monitored Anaesthesia care
2. PONV
3. LAST
4. Mallampati Classification
5. Supraclavicular block
6. Management of organophosphorus poisoning
7. Oxygen therapy in COVID
8. Cardio Pulmonary Resuscitation (CPR) algorithm
9. Anaesthetic management of post tonsillectomy bleed
10. Hepato Renal syndrome
11. Vocal cord palsies
12. Thyroid storm
13. TRALI
14. Post operative delirium
15. Management of Pheochromocytoma
16. Role of steroid in COVID-19 patients
17. Local anaesthetic toxicity
18. Anaesthetic challenges for patients on chronic steroid therapy
19. Methods of identifying epidural space
20. Anaesthesia record keeping
21. TAP Block
22. Recombinant factor VII, Role in emergency obstetrics
23. Post Dural puncture headache
24. Airway block for fiberoptic intubation
25. Metabolic acidosis
26. Management of post-extubation laryngospasm
27. Co-axial Anaesthesia system
28. Monitoring during anesthesia
29. Anesthetic implications of implantable cardiac devices
30. Hypoxic pulmonary vasoconstriction
31. Venturi principle
32. Delayed recovery
33. IV paracetamol
34. Bier's block
35. TURP syndrome
36. Management of ventricular tachycardia during anesthesia
37. Management of hypovolemic shock
38. Management of laryngospasm
39. Rocuronium
40. Role of ultrasonography in anesthesia practice
41. Preoperative consideration of the patient..... therapy
42. Discharge criteria for day care anesthesia
43. Autologous blood transfusion
44. HFIV
45. Acute chest syndrome
46. TAP block
47. Post tonsillectomy bleeding
48. Anesthesia for liver transplant

Paper 4

1. Perioperative anaphylaxis
2. high flow nasal oxygenation
3. Sugammadex
4. New CPR guidelines
5. PRP in chronic pain management
6. Remifentanyl
7. Sedation in ICU
8. Weaning from mechanical ventilation
9. Neuropathic pain
10. sepsis and the anesthesiologist
11. Antiplatelets and anticoagulants
12. Pec's block
13. non opioid analgesics
14. malignant hyperthermia
15. hyponatremia
16. CPCR latest guidelines
17. Sedation in ICU
18. Thromboelastogram
19. SOFA and qSOFA in sepsis
20. Rapid shallow breathing index
21. HELLP syndrome
22. Recommended pharmacotherapy for coronavirus (Covid 19) disease
23. organophosphorus poisoning
24. ECMO
25. Pre oxygenation its benefits and potential risks
26. Remifentanyl
27. Management of local anesthetic toxicity
28. organ transplanted patients for incidental surgery
29. premature infants and anesthesia
30. ECMO
31. biomarkers in anesthesia
32. ventilator associated pneumonia
33. Combitube
34. D-Dimer test
35. Gate control theory of pain
36. Hypoalbuminemia
37. Recombinant clotting factor VIIa
38. BIS monitoring
39. Day care anesthesia
40. Management of Flail chest
41. Rapid shallow breathing index
42. Hyponatremia
43. Anaphylactic shock
44. Bier's block
45. Utility of peripheral nerve stimulator for anesthesiologist
46. WHO step ladder approach for cancer pain management
47. Modified Aldrete score and its utility
48. Consumption coagulopathy
